DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 5-9, 13-17, 21-24 are rejected under 35 U.S.C. 102(e) as being anticipated by Tse (U.S. Patent No. 6,480,718).

The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C.

102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention “by another,” or by an appropriate showing under 37 CFR 1.131.

Regarding claims 1, 5, 8-9, 13, 16-17, 21, 24, Tse teaches a method for determining cell/sector pair radio frequency isolation values in a cellular wireless communication system, the method comprising:

transmitting on a broadcast channel in a broadcast cell/sector (col. 5, lines 36-37); disabling transmissions on the broadcast channel in neighboring cells/sectors (col. 5, line 42); directing a plurality of mobile stations operating within the cellular wireless communication system to

Art Unit: 2681

measure the strength of the broadcast channel and to measure the strength of respective serving traffic channels (col. 5, lines 44-46; col. 2, lines 49-50); receiving the measured strengths of the broadcast channel and respective serving traffic channels from the plurality of mobile stations (col. 5, lines 53-55); and using the measured strengths of the broadcast channel and respective serving traffic channels to determine cell/sector pair radio frequency isolation values (col. 5, lines 66-67; col. 2, lines 45).

Regarding claims 6-7, 14-15, 22-23, Tse teaches the method of claim 1, wherein directing a plurality of mobile stations operating within the cellular wireless communication system to measure the strength of the broadcast channel and to measure the strength of respective serving traffic channels comprises issuing a mobile assisted handoff message to the plurality of mobile stations (abstract or col. 8, lines 60-62).

Allowable Subject Matter

3. Claims 2-4, 10-12, 18-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
